

Environmental Policy

As manager and operator of Aeropuerto Internacional Reina Beatrix, Aruba Airport Authority N.V. (AAA)'s aspiration for 2030 is to become one of the most sustainable, safe, and future proof airports of the Latin America & Caribbean region, providing a trusted workplace, modern airport facilities and excellent customer service which reflects Aruban hospitality, contributing to a prosperous future for Aruba.

Whilst processing more than 3.2 million passengers and serving over 31 thousand aircraft movements per year, we embrace our environmental sustainability responsibility to manage and operate our airport responsibly by setting high operational standards, meeting relevant legal and regulatory environmental requirements, and encouraging best practices.

We commit ourselves to continuously reducing our environmental impacts, lowering pollution and waste, protecting the environment and improving our environmental efficiency in and around our airport.

We focus our environmental efforts on our carbon footprint, energy, water, waste, and biodiversity. We continuously and actively integrate sustainability into relevant policies, planning, procurement, processes and agreements, and by allocating resources to improving and strengthening our environmental management system. This includes analyzing sustainability performance and updating our environmental policy, objectives, indicators, targets, and relevant sustainability and environmental certifications.

We engage, encourage, and promote sustainable practices and initiatives among our employees and the wider airport community, and actively communicate with airport users and the public on our efforts.

James Fazio
Interim Chief Executive Officer
