

INNOVATING Happiness

THE OFFICIAL GATEWAY 2030 NEWSLETTER

Project Progress

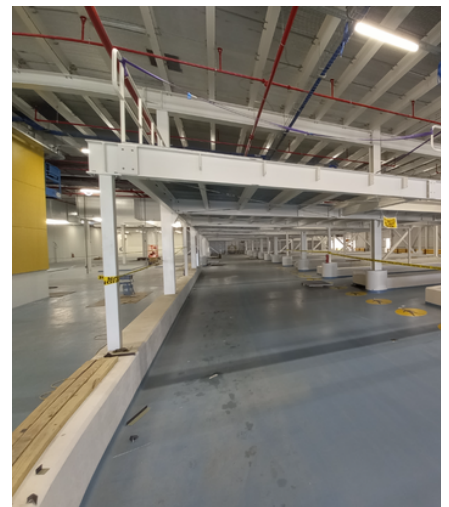

In July 2023, ABC, the construction venture, completed the installation of the roof structure in Building HA

Completed the installation of the rubber floor in CBRA and OSR rooms. This is where our security staff will check the bags.

Regarding the BHS, Beumer manufactured 100% of the CrisStore Mini loaders and 50% of the installation of the steel platform and 45% of the CrisStore Rack mechanical installation was done.

PMO Safety Tips

During the execution phase of our GW2030 Phase 1A project working at heights is unavoidable. This type of work is common in the construction industry. Working at heights is one of the biggest causes of preventable work injuries and fatalities worldwide.

Preventing falls in construction are preventable with these tips:

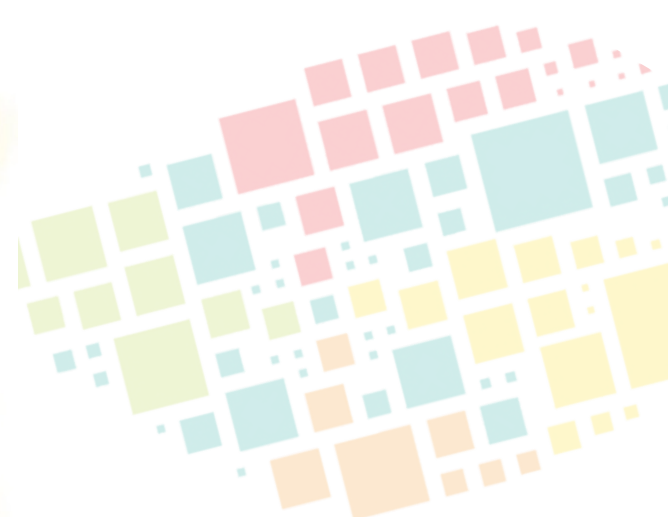

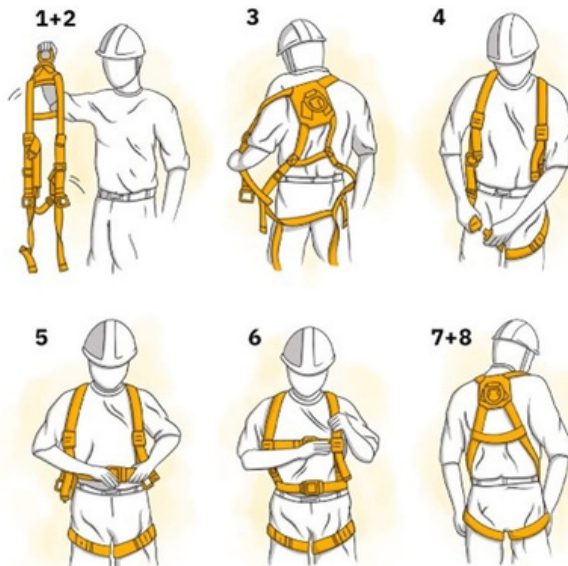

1 • Wear a harness and always stay connected.

Wear a full-body harness when working at heights at or above 6 feet. Keep the harness connected to an anchor or a series of anchor points, always using a lanyard and possibly a deceleration device or lifeline.

2 • Make sure the harness fits.

Choosing the right size and wearing it correctly saves lives; the harness should feel snug while allowing a full range of motion.

3 • Use guardrails or lifelines.

Use safety guardrails to create a barrier from the leading edge of a rooftop to prevent a fall from happening. Lifelines keep a falling worker from hitting the surface below.

4 • Inspect all fall protection equipment before use.

Inspect the equipment at the beginning and end of each workday. Look for loose threads, pulled rivets, burns, cuts, abrasions, or wear that may weaken the equipment.

5 • Guard or cover all holes, openings, and skylights.

Always cover holes or place a guardrail system along the unprotected edges of openings to keep workers from tripping or falling into them.

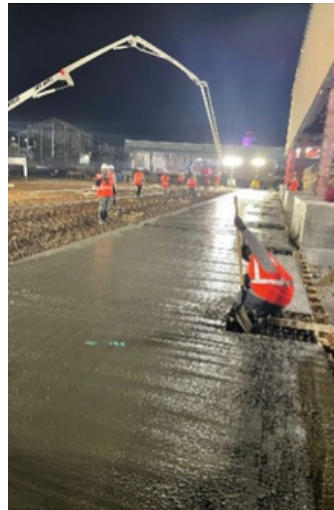

PMO News

Our colleague **Justin van Grinsven** bids farewell to the PMO team and heads over to DevTech to support them with his knowledge and experience. We wish him all the best and thank him for contributing to the GW2030 project.

Here is his story with some of his accomplishments:

I started at the PMO office on 6 September 2021 after arriving on the island on 2 Augustus 2021. Now, being on the island for almost 2 years, I am starting a new position as project lead at the Airport. I have immensely enjoyed my time at the PMO, making sure I never regretted leaving Holland. Working on the Gateway project, I focused mostly on the execution of the work, making sure the contractor delivered their promises. I witnessed a lot of early morning pourings and hot afternoon steelwork.

I want to thank all my colleagues at the PMO for supporting and guiding me in those 2 years. I'm not going far, so that's great; I'm only moving to the other side of the temporary wall that's being built.
